

Course Information Leaflet

Course title: Website Building 1 - HTML/CSS 1st Steps	Level 3	Trainer Judy Coleman
Other requirements Memory stick	Length of programme 10 weeks	

Aims of programme

To introduce learners to the concepts of website design using html and css.

Important Information:

This first course aims to give a basic understanding only of how to create a website using hand-coding. Learners should not have too high expectations! The short time available will not be sufficient to produce a complex website and follow-on courses are planned. More information will be available soon.

Learning Goals - by the end of the course you will:

Understand the layout structure of web pages, the importance of good design in search engine placement, the requirements of domain name and hosting purchase, and have created a basic website consisting of several pages, using a mixture of xhtml and css (cascading style sheets), and utilising images where appropriate.

Previous knowledge/experience:

Learners should be competent and comfortable using a computer; understanding of basic terminology (such as "click, drag, right click, menu, button" etc) is assumed.

For the first session you will need to bring:

A memory stick with ideas regarding the website you want to create and relevant photographs and/or graphic images.
